

# Driver Aptitude Assessment and E-Learning

The Aptitude Assessment is a collection of independent online driver risk assessments focusing on various principles of safe driving. These principles of safe driving are assessed via a suite of assessments, namely:

- Rules of the road
- Hazard perception
- Hazard awareness
- Reaction test
- Safe distance following
- Customers safe driving policy
- Psychometric test

We recommend that three of the assessments are selected from the suite above in any 12-month rolling period.

## THE PROCESS:

- ✓ Driver will receive an email and link to access a secure portal and commence the assessment process
- ✓ The result of the assessment, either Low, Average, Above Average or High risk, will be collated by TTC and reported to the customer. Where additional training is required and an e-learning approach is appropriate, TTC has a rules of the road e-learning module that is divided into bite-sized sections, namely:
  - Road Signs
  - Speed Limits
  - Safety Margins
  - Eco-safe Driving
  - Documents
  - Vehicle Loading
- ✓ Drivers can dip in and out of the six units until they are all completed, after which they will undertake a short assessment to validate the intended learning outcomes.

### Delivery method:

- i The driver will receive an invite to complete the assessment(s) by logging onto the portal. Each assessment can take up to 10 minutes
- i At the end of the assessment the driver will receive feedback based on their responses. Depending on the result, the driver will receive notification to complete relevant module(s) tailored to the individual.
- i For drivers recording a 'high risk' result, typically no more than 10%, we would recommend a half day On Road Driver Development Course. TTC would consult with you to determine the agreed training interventions

## KEY BENEFITS:

- ✓ Developed using research methodology and published as peer reviewed with the British Psychology Society
- ✓ Assesses multiple aspects of driving such as Rules of the Road knowledge, Observation and hazard perception, Distance following, Reaction test, Psychometric assessment using the Likert Scale, Tailored to assess individual customer policies (subject to set up cost)
- ✓ Use of video and multiple choice questions
- ✓ Risk rating provided providing customer with an insight into the driver's training needs

### Suitable for:

- ✓ Suitable for any business requiring an online driver risk assessment, involving video and hazard perception assessments rather than pure driving ability or psychometric assessment.
